

Voting terms and personal data notice

Version 2026-10-14 · effective 14 October 2026

In short: everyone can vote once per race. To make sure of that, we use a cookie, your IP address and technical traits of your device when you vote — we keep them only as one-way codes, only until voting for that race ends, and use them for nothing else. We never ask for your name, email or phone number.

1. Who runs the vote

The GT SIM Championship “Driver of the race” vote is run by **Sim master doo Beograd**, Dunavska 68, 11158 Belgrade (Stari Grad), Serbia, company registration no. 21821586, tax ID (PIB) 113195695 (the “organiser”, “we”), which is also the controller of the personal data described here. Contact: simmasterbgd@gmail.com, +381 60 49 46 481.

The Serbian version of these terms prevails in case of any difference.

2. Voting rules

- Each person may cast **one vote per race**: one driver from GT3 and one from GT4.
- A vote cannot be changed or withdrawn once sent.
- Voting opens again when the organiser resets the results, normally before each race.
- Voting from several devices or browsers, through a private (incognito) window, a VPN or proxy to gain extra votes, and automated voting (scripts, bots) are not allowed.
- The organiser may cancel votes it finds were cast against these rules.
- Results are shown publicly only as each driver’s share of the vote. Who voted for whom is never published.
- If you are under 15, vote with the consent of a parent or guardian.

3. What data we collect

When you cast a vote, and when you open the voting page (so we can show whether you have already voted), we process:

- **Your IP address** (for IPv6 addresses, only the network part — the first 64 bits).
- **A device fingerprint** — a code worked out in your browser from your device’s technical traits: browser and operating system type and version, language, screen resolution and pixel density, time zone, number of processor cores, approximate memory, touch support and graphics processor name. The values themselves never leave your device — only the code is sent.
- **A dod_voter cookie** holding a random identifier, set only once you cast your vote. It lasts 12 months, is readable only by our voting server and is not used to track you on other pages.
- **The time of your vote, the drivers you picked and the version of these terms** you accepted, linked only to the cookie identifier (so we can mark “Your vote” in the results).

In the voter register we **never store your IP address, fingerprint or cookie identifier as they are** — only as one-way cryptographic codes (HMAC-SHA256 with a secret key), from which the original values cannot be recovered. We do not collect your name, email, phone number or location.

Separately from the vote, our hosting provider’s server may keep standard technical access logs (including IP addresses) in line with that provider’s practice.

4. Why we process it

We use this data **only** to stop the same person voting more than once and to detect automated voting, so the result is fair. We do not use it for advertising, profiling or analytics, we do not sell it and we do not combine it with other data.

5. How we prevent multiple votes

A vote is refused if, in the same voting round, we have already recorded:

- the same `dod_voter` cookie (the same browser);
- the same device fingerprint from the same network (for example a private window or cleared cookies on the same device); or
- the maximum number of votes from the same network (currently 3), so several people in one household or on one Wi-Fi can vote, but only up to a limit.

If two people have the same device model with the same settings and use the same network, the second vote may be treated as a repeat. If that happens, please contact us.

6. Legal basis

We process this data on the basis of your **consent**, which you give by ticking “I accept the voting terms...” before casting your vote (Article 12(1)(1) of the Serbian Law on Personal Data Protection, Official Gazette of RS No. 87/2018). The same consent covers setting the cookie and reading your device’s technical traits. Preventing abuse of the vote is also our legitimate interest (Article 12(1)(6)), which does not override your interests because we process the minimum data, in pseudonymised form and for a short time.

Giving consent is voluntary, but voting is not possible without it, since we cannot enforce “one vote per person” without this data.

7. How long we keep it

The voter register is **permanently deleted when the organiser resets the vote** — at the latest before voting opens for the next race, and within 30 days of the last race of the season. The cookie stays in your browser until it expires (12 months) or you delete it, but once the register is deleted it is no longer linked to any data we hold.

8. Who can access it

Only the organiser and our hosting provider, which stores the data on its servers solely on our instructions. We do not pass the data to anyone else unless required by law or a competent authority.

9. Changes to these terms

The organiser may change these terms. A new version applies from its publication on `simmaster.rs` to votes cast after that; for every vote we record which version was accepted.
